Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/077,062	Applicant(s) WOOD ET AL.	
	Examiner Erick Rekstad	Art Unit 2621	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 July 2006.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3,5-7,9-14,16-18,20 and 22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3, 5-7, 9-14, 16-18, 20 and 22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This is an Office Action for application no. 10/077,062 in response to the RCE filed on July 17, 2006 wherein claims 1-3, 5-7, 9-14, 16-18, 20 and 22 are presented for examination.

Response to Arguments

Applicant's arguments with respect to claims 1-3, 5-7, 9-14, 16-18, and 20 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

Claim 13 is objected to because of the following informalities: The claim states "sub-mages" which should be "sub-images". Appropriate correction is required.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 20 is rejected under 35 U.S.C. 101 because the claim does not meet the 35 U.S.C. 101 requirements (the claims have improper language regarding the computer program). Please see the USPTO "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility" Page 53 Lines 7-8 in the Official Gazette notice of 22 November 2005.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 9, 10, 12-14, 16, 17, 20 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 5,777,720 to Shapiro et al.

[claims 1, 3, 13 and 20]

As shown in Figures 7 and 9, Shapiro teaches an apparatus and method for producing a stereoscopic image comprising:

The display means is an auto-stereoscopic display which provides sub-images spaced from one another at a first distance along an X-axis and a second distance along a Z-axis so as to render the stereoscopic image (Col 3 Lines 30-38, Col 4 Lines 18-41, Col 5 Lines 30-38). Note, Shapiro specifically teaches the calibrating for interpupillary distances and viewing distances (Col 5 Lines 30-38).

A single user control (camera (37) and image analyzer (38) of Figure 7) operative to adjust the first and second distances of the stereoscopic image displayed by the display means wherein at least the first distance of the stereoscopic image displayed on the display means is adjusted to correspond to a distance between eyes of a user (Col 10 Lines 28-47 and Lines 59-65, Col 11 Lines 50-61, and Col 12 Lines 2-20, Figs 10, 11a-11d, 12a-b).

[claims 2, 12, 14 and 22]

Shapiro teaches the use of the adjusting for multiple types of auto-stereoscopic displays (Figs 13-20). One such display is an LCD with a lenticular screen (Col 13 Lines 30-38, Fig. 20).

[claims 9, 10, 16 and 17]

Shapiro teaches the importance of adjusting the two variables in order for people who do not meet average observer parameters may perceive the three-dimensional effect of 3D displays (Col 2 Lines 1-10). Shapiro further teaches the first parameter is for changes in the X direction, which has been shown to adjust for interpupillary distance allowing for perceived depth. The second parameter is for the Z direction which relates to viewing distance (Col 10 Lines 59-65).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shapiro.

[claim 18]

As shown above for claims 1 and 13, Shapiro teaches the apparatus and method for stereoscopic display. The apparatus includes an Image analyzer (38) and a controller (16) which performs the method of Figure 9. Though Shapiro does not specifically teach the use of a program, it would have been obvious to one of ordinary skill in the art at the time of the invention that the processors would require a program to run the method (Official Notice).

Claims 5, 7, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shapiro in view of US Patent 6,816,158 to Lemelson et al.

[claim 5]

As shown in Figure 7, Shapiro teaches the single user control is a camera (37) and image analyzer (38) which obtains images and adapts the display based on the users position and interpupillary distance (Col 10 Lines 28-47). Shapiro does not teach a physical user control such as a knob.

Lemelson teaches an apparatus for producing a stereoscopic image comprising display means (10) for displaying an image and user control means (Fig. 11) for controlling two stereoscopic parameters (shifting and width) of the image displayed by the display means (Fig. 1, Col 7 Line 48-Col 8 Line 17); said user control means being a single control (joystick) (Col 10 Lines 26-40). Note, Lemelson specifically teaches an example of simultaneous control, where in the viewer uses the joystick to move left and back (Col 8 Lines 36-40). As shown in Figure 11, Lemelson teaches the use of a joystick (146) for use as the control means, which is functionally equivalent to a knob (Col 4 Lines 21-24 and Col 10 Lines 20-40). It would have been obvious to one of ordinary skill in the art at the time of the invention to use the manual controls of Lemelson with the stereoscopic display of Shapiro in order to allow the user to determine the desired display configuration as taught by Lemelson.

[claim 7]

Lemelson further teaches a remote device (8 of Fig. 1) communicating with said user control means (Fig. 11) (Col 8 Lines 18-54 and Col 10 Lines 20-40). As shown above for claim 5, it would have been obvious to one of ordinary skill in the art at the time of the invention to use the manual controls of Lemelson with the stereoscopic

display of Shapiro in order to allow the user to determine the desired display configuration as taught by Lemelson.

[claim 11]

Shapiro teaches the ability to adjust the display within the parameters of the system (Col 12 Lines 9-19). Shapiro is silent on the user control being at a minimum the perceived depth of the image is at a minimum and as said single user control moves from a minimum to a maximum the perceived depth of the image increases. As shown in Figure 11, the control allows for a forward and backwards movement (depth). The movement is further controlled by a LUT (Col 9 Lines 30-31 and Lines 62-63). Lemelson further teaches the limit of the width based on the lenticular screen (Col 8 Lines 12-17). Note, the use of the LUT provides a minimum and maximum value for the depth.

As shown above for claim 5, it would have been obvious to one of ordinary skill in the art at the time of the invention to use the manual controls of Lemelson with the stereoscopic display of Shapiro in order to allow the user to determine the desired display configuration as taught by Lemelson.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shapiro and Lemelson as applied to claim 1 above, and further in view of US Patent 6,760,020 to Uchiyama.

[claim 6]

Shapiro teaches the apparatus of claim 1. Shapiro and Lemelson further teach the use of a manual control for a user to control the display, as shown above for claim 5.

Lemelson teaches the remote control as shown in Figures 11 and 12. Lemelson does not teach the use of a graphical icon. Uchiyama teaches the use of graphical icons to provide a user a visual of the control means (Col 11 Lines 15-29, Fig. 16). It would have been obvious to one of ordinary skill in the art at the time of the invention to provide a graphical icon for the user control in order to provide a visual of the parameters changed as taught by Uchiyama.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Patent 6,040,807 to Hamagishi et al.

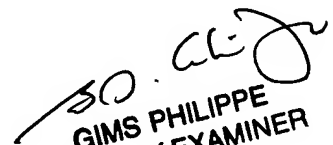

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erick Rekstad whose telephone number is 571-272-7338. The examiner can normally be reached on 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mehrdad Dastouri can be reached on 571-272-7418. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
